Whitepaper for Crotch Token

Introduction: A Token Like No Other

In the crowded world of cryptocurrencies, where serious projects often jostle for attention alongside a sea of memes, Crotch Token emerges with a mission: to combine the best of both worlds. We're not just here to add another "funny" token to your portfolio. Crotch Token ($CROTCH) is serious about creating value, driving community engagement, and giving back to society, all while making you laugh (and maybe blush) along the way.

Born out of a desire to challenge the meme coin status quo, Crotch Token combines innovative tokenomics, robust multi-chain functionality, and a strong community focus. And yes, it's a crotch joke at heart, but it's also a token with legs (and maybe some questionable dance moves).

Tokenomics: A Robust Foundation with a Playful Twist

Key Details:

Token Name: Crotch

Ticker: $CROTCH

Total Supply: 400 million tokens

Networks:

Ethereum (ERC-20): 320M (80%)

Cronos (CRC-20): 80M (20%)

Presale:

Presale Hardcap: $400,000 USD

Presale Price: $0.003

Minimum Buy per Wallet: $50

Maximum Buy Per Wallet: $2500

Public Listing Price: $0.005

Circulating supply at TGE: 40,000,000

Token Allocation

We’ve designed $CROTCH’s token distribution with both fairness and longevity in mind:

Crotch Token’s total supply is 400 million tokens, carefully divided to ensure a healthy ecosystem, support long-term growth, and reward our amazing community. Here’s how the tokens are allocated and what each category means:

1. Airdrop (5%) = 20 Million Tokens

These tokens are free giveaways for early supporters and marketing efforts.

How it works:

40% of the tokens (8 million) will be available immediately when the token launches (TGE).

The remaining 60% (12 million) will be distributed over 6 months in small portions to keep the excitement going.

2. Bridge Initial Pools (7%) = 28 Million Tokens

These tokens are reserved to support the bridge between Ethereum and Cronos networks.

Why it’s important:
This bridge ensures that tokens can flow seamlessly between the two networks, keeping prices consistent.

3. Presale (33%) = 132 Million Tokens

These tokens were offered to early investors at a discounted rate of $0.003 per token.

How it works:

- Only 20 million tokens are expected to be in circulation at TGE
- The remainder will be held by long-term holders or used in staking, resulting in low initial market liquidity

4. Treasury & Marketing (15%) = 60 Million Tokens

These tokens fuel marketing campaigns, partnerships, and ongoing project development.

How it works:

6.7% of these tokens (4 million) will be available immediately at launch.

The rest (56 million) will be gradually released over 6 months.

5. The Destination Treasury (10%) = 40 Million Tokens

The Destination Treasury is your gateway to incredible opportunities. Imagine turning your $CROTCH holdings into chances for something unforgettable. While we're keeping the details under wraps for now, let's just say this is your chance to make holding $CROTCH even more rewarding. Whether it's adventure, excitement, or a little extra thrill, the Destination Treasury is designed to surprise and delight our community in ways that go beyond the ordinary. The more you hold, the more the journey unfolds, stay tuned, because the best is yet to come!

How it works:

100% of these tokens (40 Million) will be locked for 6 months.

6. Liquidity Pools & Future Listings (30%) = 120 Million Tokens

Tokens reserved to bootstrap trading across DEXs and future CEXs.

How it works:

- 8 million tokens deployed to liquidity at TGE (20% of LP allocation)
- 112 million tokens locked, 2-month lock for CEX liquidity and gradual future rollouts
- ETH and Cronos liquidity will be paired proportionally

7. Circulating Supply at Launch

What's available at TGE (Token Generation Event)?:

Airdrop: 8 million tokens (40% of 20 million).

Presale: 20 million tokens.

Treasury & Marketing: 4 million

Liquidity Pools: 8 million tokens.

Total Circulating Supply at Launch: 40 million tokens, or 10% of the total supply.

Taxation: The $CROTCH Payback System

<u>How Taxes Work</u>

Both buy and sell taxes are set at 4% and are collected in ETH &CRO and allocated as follows:

1. 1% to the team
   For project development and growth. Collected in ETH or CRO
2. 1% to charity:
   Funds collected in ETH or CRO.
3. 1% to buyback pool:
   Tokens collected in ETH & CRO sent to a buyback wallet address, which will be intermittently used to stabilise the price. Buyback tokens then sent to the Crotch Bridge rewards pool.
4. 1% to airdrop rewards:
   Collected in ETH & CRO tokens to incentivize long-term holding.

Charity Voting: The Heart of Crotch

Charity is a cornerstone of Crotch Token's ethos. Here's how we ensure it's done right:

1. **Charity Submission:**
   Any user can propose a charity through the website. Submissions are reviewed to ensure they align with our values. No, we're not funding your pet iguana's yoga classes.

2. **Shortlisting:**
   Our team narrows down the options to three charities. Transparency is key, so

we'll share the reasons behind the selections.

3. **Community Voting:**
   Any user can vote for their favorite charity. We encourage sharing on social media so that the selected charities have the best chance of as many votes as possible.

4. **Final Donation:**
   Funds are sent directly to the chosen charity in USDC. Holders can track every dollar for full accountability.

Holder Rewards: Making Loyalty Profitable

We don't just reward long-term holders; we spoil them! When a user holds Crotch tokens, they are rewarded in CRO (Cronos) or WETH (Ethereum) every three months. The longer the tokens are held, the bigger the rewards. If a user sells their tokens, they lose out on rewards for the amount they sold, but they still earn rewards on what they continue to hold.

Example Breakdown:

Martin Holds 1 Million Tokens:

If Martin holds all 1,000,000 Crotch tokens for 6 months, his rewards will double compared to those who are just qualifying for their first reward. This means the longer Martin holds, the more he earns.

Martin Sells 100,000 Tokens:

Martin forfeits the rewards on the 100,000 tokens he sold. However, he will still earn rewards on the remaining 900,000 tokens.

Forfeited Rewards:

The rewards that Martin gave up by selling his tokens are redistributed to other holders who didn't sell. This means the people who kept holding get an extra boost in their rewards.

Where Do the Sold Tokens Go?

When Martin sells his 100,000 Crotch tokens, they go back into circulation through the liquidity pool where other traders can buy them. However, the rewards tied to those sold tokens do not vanish.

Instead: The rewards tied to the sold tokens are calculated and distributed among the remaining eligible holders. This creates an incentive for people to **keep holding** rather than selling.

Why is This System Smart?

Encourages Long-Term Holding: The longer you hold, the bigger your rewards get.

Benefits Loyal Holders: If someone sells, their forfeited rewards are given to the loyal holders who didn't sell.

Balances the Ecosystem: Tokens sold go back to the liquidity pool, ensuring trading stability.

Flexibility: People can trade freely without being locked into a staking contract.

Rewards redistribution builds loyalty and discourages short-term selling.

No Additional Steps: Investors don't need to "stake" their tokens manually, it's all automatic.

Anti-Whale and Anti-Bot Mechanisms

Fairness is non-negotiable:

Transaction Limits: Initial cap of 0.2% of total supply per transaction to prevent dumps.

Cooldown Period: Prevents rapid trades, reducing price manipulation.

Dynamic Adjustments: Limits ease as the token matures

The Bridge: Multi-Chain Magic

Crotch Token bridges Ethereum and Cronos seamlessly:

Why a Bridge?

To ensure liquidity and prices are consistent across networks.

How It Works:

Tokens locked on one network mint on the other, maintaining balance.

Benefits:

Expands the ecosystem while supporting CRO adoption and liquidity.

Why Invest in $CROTCH?

Charity Impact: Your investment supports real-world causes.

Viral Appeal: The name alone is marketing gold.

Holder Rewards: Earn passive income just for holding.

Burn Mechanism: Ensuring value growth over time.

Multi-Chain Power: Expanding awareness through Ethereum and Cronos.

Community First: Voting, engagement, and transparency at every step.

What’s Next?

We’re just getting started. The roadmap is filled with exciting developments, with new utility features. And yes, there are secrets we’re itching to reveal, but only when the time is right. Trust us, you’ll want to hold on to your $CROTCH for this ride.

Don’t miss your chance to join the journey. The crotch rocket is about to take off! 🚀
